Re: Site Location of Development Law and Natural Resources Protection Act Applications on behalf of Calais LNG Project Company, LLC & Calais LNG Pipeline Company, LLC, Calais Response to MEDEP Comment letter dated March 30, 2010

Dear Ms. Blais:

This letter is to submit additional information and clarification to address the comments provided to you by Cyndi Darling on March 26, 2010. Her comments reference Section 18, Solid Waste of the Site Location of Development (SLOD) Permit application submitted to the Department in January, 2010.

In response to the first comment, demolition and construction waste from the Calais LNG project will be hauled to the Subtitle D landfill Juniper Ridge Landfill in Old Town, Maine for disposal. As stated in the application, Juniper Ridge was contacted and it was confirmed that they have sufficient capacity to accept all waste resulting from demolition and construction. SLOD Section 18 — Appendix 18-A contains a capacity letter from Juniper Ridge, dated May 15, 2009.

In response to the second comment, it is anticipated that typical operation will generate solid waste typical of general office trash, which would include paper, small quantities of food waste, and other similar waste. The quantity estimates provided in the application based on the assumption that each worker will generate no more than two pounds of waste per day are accurate and consider the full range of waste typically found in such waste streams. Operational waste will be hauled to the Baileyville transfer station. A letter from the Baileyville facility dated April 16, 2010 confirming that they have the capacity to accept this waste is enclosed.

Thank you for the opportunity to provide responses to Cyndi Darling's comments on the solid waste aspects of the proposed project. We trust the responses will adequately address her concerns, but please do not hesitate to contact us if you need further information or clarification.

Sincerely,

WOODARD & CURRAN INC.

Re: Capacity Statement - Proposed Calais LNG Project

To Whom It May Concern:

This letter is to confirm that the Baileyville Transfer Station located in Baileyville, Maine has the capability and capacity to accept and dispose of the estimated 15 tons per year general office waste generated from Terminal operation of the proposed Calais LNG Project. It is my understanding that Terminal facility will be operational some time after 2014.

Should you have any questions I can be contacted at 427-8330.

Sincerely,

A handwritten signature in cursive script that reads "James McLaughlin".
